EXHIBIT A

Is the number real?

A dashboard moved. Seven fragmented sources. One hour before the meeting.
Exhibit A puts every explanation on trial and returns an auditable verdict.

DATA ARTIFACT · REAL CHANGE · MIXED · INSUFFICIENT EVIDENCE

96.2%

of the FY2018 jump is a filing-year artifact

3.8% real · 0.0% unexplained

Sample verdict. Live close passed 8/8 readback checks.

SAMPLE_MODE is labelled replay, not live inference.

THE PROBLEM

A fluent answer is not an audit trail

The expensive question is not “what is the new number?” It is “is this number real, and which source caused it?”

01

Duplication

The same annual fact is filed across periods. A naive view sums it again.

02

Missing source

A concept stops or a source disappears. The total silently shrinks.

03

Concept switch

A company changes its revenue tag. History looks like a collapse.

04

Real change

The movement survives deduplication and an independent second channel.

Most tools return a chart or a confident paragraph. Exhibit A returns a verdict with a share, a time, and a rerun command.

THE WORKFLOW

Eleven steps, one evidence chain

1 **Recall**
H-MEM cold/warm

2 **Discover**
catalog + SEC

3 **Baseline**
onset + band

4 **Hypothesize**
five causes, suspects from data

5 **Exhibit**
SQL + hash

6 **Quantify**
counterfactual

7 **Critique**
Nemotron

8 **Gate**
code decides

9 **Repair**
shadow + contract

10 **Approve**
operator

11 **Writeback**
re-read + USL

The reported view is never replaced in place. Every write needs a signed, scoped contract and a separate operator approval.

THE VERDICT

A share, not a story

MIXED

FY2018 Manufacturing revenue jump · a second metric (sector net income) is adjudicated DATA_ARTIFACT by the same code

filing_year_duplication **96.2%**

real_change **3.8%**

Gate: pass · unexplained: 0.0% · SEC second channel: 12/12 cells

THE QUESTION

Is the FY2018 jump real?

THE MOVE

$1.456T → $2.751T

THE CORRECTED SERIES

One annual fact per (cik, period_end)

THE SECOND CHANNEL

SEC frames/companyconcept parity

The model can object. Code decides.

ARCHITECTURE

The fact path is deterministic

Zetaris owns the facts. Tools own the evidence. Agents propose. Code gates. The critic is outside the verdict path.

SPONSOR 01 · ZETARIS

Zetaris is the fact path, not a badge

Read	SHOW · DESCRIBE · SELECT · INFER SQLTABLE	catalog, schema, lineage
Prove	counterfactual + SEC second channel	96.2% artifact / 3.8% real
Repair	isolated shadow under signed contract	7/7 verifier invariants
Write	exhibit_a.sector_revenue_by_year_v2 + revenue_facts USL	composite key + DQ rule
Verify	separate session re-reads final + original	8/8 checks, original hash unchanged

LIVE CLOSE

8/8
readback checks

12 shadow/final cells
0 missing · 0 mismatched · 0 extra

102 USL records
102 valid · 0 invalid

The reported analytics view is never named in a write statement.

SPONSOR 02 · METERLESS

Memory and contracts that are inspectable

H-MEM

Recall before a case. Remember at CLOSED. Audit malformed records. Mine closed logs.

cold 0 hits → warm 1 hit · similarity 0.72

MARKOVIAN

Bounded evidence chunks with previous/next transition keys in the critic request.

the exact windows are on the exhibit

WORLD MODEL

Append-only, idempotent lineage graph. The gate checks the artifact is upstream of the symptom.

28 nodes in the sample graph

SCOUT INTENT

HMAC-signed, scoped statements with expiry. The writer executes only what was signed.

tamper / expiry / scope rejected

These are original reference implementations of the documented engine contracts — not a vendored Meterless runtime.

SPONSOR 03 · NVIDIA

Three bounded Nemotron roles

DEFENSE COUNSEL

Defense Counsel attacks each cause with JSON objections. Content safety labels the finding. Embeddings re-score H-MEM recall.

5
recorded objections

2,620
prompt tokens

5,051
completion tokens

Requests exclude ids and timestamps; six recorded responses (cold and warm) replay exactly.

Critic nemotron-3-nano-omni-30b · Safety nemotron-3.5-content-safety · Recall nemotron-3.5-embed-1b

THE BOUNDARY

- **Objections are advisory.**
  They cannot promote a cause or change a share.
- **Unknown citations are flagged.**
  A model cannot invent an exhibit id.
- **Unsafe prose is blocked.**
  Lexical guard plus the Nemotron content-safety model; either can withhold the finding.
- **The code gate is final.**
  The critic is outside the verdict path.

Ultra is configurable; the committed replay uses the JSON-capable Nano route.

PROOF

The demo is reproducible without keys

18/18
eval claims pass

69
tests pass

7/7
shadow invariants

8/8
writeback checks

23
investigation exhibits

33
closed exhibits

```
npm run eval   ·   npm run web   ·   docker run --rm exhibit-a:local
```

Cold and warm H-MEM, a deliberate ablation, recorded critic, content safety, a closed sample writeback, and a second metric (sector net income: DATA_ARTIFACT, IBM as the late-starting source, real change eliminated) are all in the committed result.

The sample is labelled replay. The live close is committed under fixtures/cases/live and is the first case in the viewer.

EXHIBIT A

Adjudication, not summarization.

A model can object. Code decides. The repair is proven before it is written, and the writeback is re-read through a separate session.

Evidence

Every claim has SQL, a result hash, and a rerun.

Second channel

SEC frames/companyconcept is part of the verdict.

Operator gate

Approval and writeback stay in the CLI.

Memory

The warm run reuses a closed case; a second metric runs on the same code.
